

INT. CHURCH LAUNDRY ROOM - DAY

Kent stands beside a washing machine.

KENT

A simple demonstration should clear things up.

(holds up a bucket of
Lego)

These Lego bricks are just like the chemicals in the pre-biotic soup. You can assemble them in millions of different ways. Now...

(dumps the Lego into the
washing machine)

Any guesses on how many minutes it'll take these Lego bricks to assemble themselves into something like this?

(holds up a Lego
instruction book)

No takers? Fine. We'll check back a little later.

He turns on the washing machine and slams the lid.

INT. SCIENCE CLASSROOM - DAY

Kent pours rat poison into a candy dish.

KENT

Mmm... Yum. Anyone want a taste?

He holds it out for the students, but all of them shake their heads in disgust.

KENT (CONT'D)

Come on, the box says the poison content is only...

(reads from the box)

0.005 percent. Still no takers? You're smarter than you look. You know, rat poison is just like an effective lie. If you want someone to believe a lie, all you have to do is surround it with truth! That's exactly what the evolutionists do. They wrap a small lie in a whole lot of science and then call it a fact. And it's killing people's faith in God.

IN THE LAUNDRY ROOM

Kent opens the washing machine. The students peer inside.

KENT
Any luck?

STUDENT
Nope.

KENT
Think we'd have any more luck if we let them tumble around in there all day? For a year? Ten thousand years? We'd have one heck of a power bill, but I can guarantee you we wouldn't be anywhere near this.

He holds up the Lego instruction booklet.

INT. SCIENCE CLASSROOM - DAY

Kent writes the word "Information" on the blackboard.

KENT
That's because without information to organize them, all you have are a bunch of chemicals sloshing around. They'll never turn into anything. But evolutionists believe this didn't just happen once. It happened millions of times throughout history! They take it totally on faith. They have absolutely no proof. And they think we're crazy for believing in God?

SERIES OF SHOTS

Kent packs the family's things into a moving van as Jo, pregnant with their second child, and Kent Andrew look on.

The moving van drives past a sign that says, "Welcome to Bourbonnais, Illinois!"

KENT (V.O.)
Cells are just like computers, complete with software and hardware. The software is the DNA, and the hardware is the rest of the cell that knows how to read and process the DNA code.

A sign outside a church reads, "Faith Baptist Academy."

KENT (V.O.) (CONT'D)
Hardware and software cannot evolve independent of one another. They had to have been created together!
